

Health and Safety Excellence program Topics

There are over 40 health and safety topics in the Health and Safety Excellence program (HSEp) to select from. Typically, a business would select foundational topics first and then progress from there. It is not a requirement to complete topics in a specific order. There are many choices, and your internal employees (Management, Health and Safety Representatives and Specialist) can point you in the right direction. Your WSPS HSEp Consultant can also guide you on making the right decision based on your business needs.
